Model Index

Cover mount vertical wastewater models are suspended and supported by a floor plate. The floor plate is larger than the opening in the wet well cover and rests on the wet well cover. The opening in the wet well cover is determined by the size of the pump case.

Free-standing models are supported by feet and rest on the wet well floor.

All Models

- Simplex and duplex systems
- Cast iron construction
- Enclosed shaft
- Discharge piping, floor plates, and legs are galvanized
- Totally enclosed fan cooled ball bearing motors are standard
- 1150 or 1750 RPM, 60 Hz
- Single-phase 115 / 208-230 V
- Three-phase 208-230 / 460 V
- Flexible coupling between motor and pump shaft
- Ball thrust bearing on all models. No pump thrust load is transferred to the motor
- Impeller clearance is adjustable
- Grease lines to lower and intermediate bearings on many models
- Bottom suction

Options

- UL Explosion-proof motors
 - Bronze impeller
 - Graphite bearings for hot water
 - Rubber cutless bearing for abrasive waste
 - Models for wet wells from 2 to 15 feet deep
 - Two section construction
 - Stainless Steel shaft
- Some options are not available on all models

Submersible Single Seal Wastewater Models

- Simplex and duplex systems
- Single mechanical seal
- Cast iron construction
- Stainless Steel shafts
- Power cable – 20 feet
- Single-phase motors are capacitor start, induction run with built-in overload protection.
- Motors 1750 or 3500 RPM
 - Single-phase 115 or 208-230 V, 60 Hz
 - Three-phase 208-230 or 460 V, 60 Hz
- Floor Mount – Vertical discharge with tripod support legs. Connection is NPT.
- Removal System 2613 – Pump can be removed from wet well without disconnecting the discharge piping. The 2613 components are not included with the pump.

Refer to **Accessory Index** page to view 2613 Removal System and 2616 Duplex Valve Assembly

Options

- Bronze impeller
 - Moisture sensor
 - 50 Hz motors
 - High temp seal and o-rings
 - Black epoxy paint
 - Extra power cable lengths
- Some options are not available on all models

ANSI = American National Standard Institute
125# flange connection. Provided with flange holes for bolt mounting.

NPT = National Pipe Taper. Discharge has a female threaded connection suitable for threaded pipe.

Weil submersible motors are air-filled. The only submersible motor with worldwide engineering acceptance is an air-filled motor. The manufacturing cost is higher. The end result is better.

Submersible Double Seal Wastewater Pump

- Simplex and Duplex systems
- Double mechanical seals
- Cast iron construction
- Stainless Steel shafts
- Power cable – 25 feet
- Single-phase motors are capacitor start, induction run with built-in overload protection
- Motors 1150, 1750, or 3500 RPM
 - Single-phase 115 or 208-230 V, 60 Hz
 - Three-phase 208-230 or 460 V, 60 Hz
- Floor Mount – Vertical discharge with tripod support legs. Connection is available as NPT or flanged.
- Removal System 2613 – Pump can be removed from wet well without disconnecting the discharge piping. The 2613 components are not included with the pump.

Refer to **Accessory Index** page to view 2613 Removal System and 2616 Duplex Valve Assembly

Options

- Bronze impeller
- Moisture sensor and temperature limiter
- Stainless Steel models
- 50 Hz motors
- UL Listed, Class 1, Group C & D explosion proof motor
- High temp seal and o-rings
- Black epoxy paint
- Extra power cable lengths
- Some options are not available on all models

ANSI = American National Standard Institute 125# flange connection. Provided with flange holes for bolt mounting.

NPT = National Pipe Taper. Discharge has a female threaded connection suitable for threaded pipe.

Flange = Weil Oval Compression Flange – Does not require threads on O. D. of pipe. Consists of a rubber compression gasket and a companion flange that fits the O.D. of standard pipe. Tightening the flange bolts clamps the rubber gasket on the O. D. of the pipe. Provides adjustability for pump-to-pipe connection.

Weil submersible motors are air-filled. The only submersible motor with worldwide engineering acceptance is an air-filled motor. The manufacturing cost is higher. The end result is better.

Grinder and Slicer wastewater pumps are available in vertical, submersible, and dry well models.

Vertical models are available as cover mount style or Removal System 2613 style.

Submersible models are available as floor mount style or Removal System 2613 style.

Dry well models are available as horizontal or vertical mount styles.

Grinder Models – To 100 GPM. Solids are reduced to a 3/8-inch diameter by the grinder cutter and shredding ring components. The 3/8-inch solids are then pumped by the impeller into the discharge line. The impeller is sized to efficiently pump the slurry at flows and pressures determined by the system design.

The grinder portion consists of a hardened rotating cutter mounted on a stainless steel motor shaft. A stationary shredding ring is positioned in the pump inlet. On all models the cutter and shredding ring are made from 440C stainless steel hardened to Rockwell 58C. The semi-open impeller is cast iron. A bronze impeller is available as an option.

Slicer Models – To 650 GPM. Effectively slices and cuts sewage solids into pumpable pieces. The slicer will devour sanitary napkins, tampons, disposable diapers, paper towels, newspapers, shop towels, and cigars.

The two slicer blades are 440C stainless steel hardened to Rockwell 58C. One blade rotates with the iron impeller and the other blade is stationary.

The slicer model combines many of the characteristics of non-clog, cutter, and grinder pumps.

A slicer model will process more sewage gallons per minute than a grinder model.

Cover Mount Style = Pump floor plate rests on the wet well cover.

Floor Mount Style = Vertical discharge with tripod support legs. Connection is NPT.

Removal System 2613 - Pump can be removed from wet well without disconnecting the discharge piping. The 2613 components are not included with the pump.

Grinder

The grinder portion consists of a hardened rotating cutter mounted on a stainless steel motor shaft. A stationary shredding ring is positioned in the pump inlet.

On all models the cutter and shredding ring are made from 440C stainless steel hardened to Rockwell 58C. The semi-open impeller is cast iron. A bronze impeller is available as an option.

Slicer

The two slicer blades are 440C stainless steel hardened to Rockwell 58C. One blade rotates with the iron impeller and the other blade is stationary.

The slicer model combines many of the characteristics of non-clog, cutter, and grinder pumps.

A slicer model will process more sewage gallons per minute than a grinder model.

WEIL Wastewater Pumps

Vertical and Submersible Models

Stainless Steel

Model Index

Stainless Steel pumps are available in vertical and submersible floor mount models. All pump components are cast not welded 316 stainless steel.

Vertical models can be installed as cover mount or floor mount. Graphite sleeve bearings and ball thrust bearing are on all models. Vertical models have cast 316 stainless steel wet end components.

- Case
- Impeller
- Shaft
- Leg(s)
- Discharge Pipe

Submersible models are floor mount and have a double tandem seal. Submersible models have cast 316 stainless steel pump and motor components.

- Case
- Impeller
- Motor Shell

All models have NPT discharge.

NPT = National Pipe Taper. Discharge has an threaded connection suitable for threaded pipe or fittings.

WEIL Wastewater Pumps

Submersible and NEMA Motors

Dry Well

Model Index

Dry well wastewater models are designed to be installed in a dry area adjacent to a wet well.

Dry well models can also be installed as a booster pump in a sewage force main. A typical installation has a submersible pump in the wet well with dry well pumps installed at intervals in the force main.

Dry well models are also used with above ground wet storage tanks. Install with a valve on the suction side, and a valve and check-valve on the discharge side. A compact, easy-to-install and maintain pump arrangement is possible.

All NEMA motors are Totally Enclosed Fan Cooled.

Several dry well models are matched to a Weil double-seal submersible motor. This style is used in locations where flooding of a dry well may occur.

Dry well models with NEMA motors can be either horizontal or vertical mount.

Explosion-proof motors are available on all models.

Listed by Discharge Size then Solid Size.

Removal System - 2613

The 2613 removal system permits removal and re-installation of a pump without disturbing the discharge piping. The pump is bolted to the sliding bracket. The cast iron floor elbow is mounted to the Sub Base or the wet well floor. A wedge type design between the sliding bracket and floor elbow assures a tight fit. Guide pipes are mounted on the floor elbow and an upper guide pipe bracket. The guide pipes steer the pump to a perfect landing on the floor elbow. Available in 2, 3, 4, or 6 inch ANSI discharge sizes.

System Description

- One - Discharge Floor Elbow
- One - Sliding Bracket - Select
 - Iron or
 - Bronze for use with Explosion Proof Motor
- One - Guide Pipe Bracket - Select
 - A - Flat (cover mount) - bolts to wet well cover or
 - B - Angle 90° (side mount) - bolts to vertical Side wall or
 - C - BCB-1 bracket - mounts to discharge pipe
 - D - BCB-2 Duplex bracket - 2, 3, or 4 inch only

Not Included

Guide Pipes, Discharge Pipe, Flanges

Options

- Discharge Flange Kit for Floor Elbow
- Intermediate Guide Pipe Bracket
- Sub Base for Floor Elbows
- Level Control Lifting Assembly for BCB Duplex Bracket

Sub Base - Duplex 2613

Duplex Valve Assembly – 2616

The 2616 valve assembly has the check valve and isolation valve requirements for a duplex wastewater pumping system combined into one unit. The 2616 assembly consists of two wastewater check valves and one four-way isolation valve.

The four-way valve can isolate the lead pump, the lag pump, or the discharge line. The standard operating position has the lead pump and lag pump open to the discharge.

The check valves and isolation valve body have standard ANSI B61 iron 125 PSI flanges.

The 2616 valve assembly saves many hours of installation time. Available in 2, 3, or 4 inch ANSI flange discharge sizes.

**Control Panel
8159**

Control Panels - 8100

Weil makes a full line of control panels. Controls can be used with vertical, submersible and dry well pump systems.

Control Panel models

Simplex panel controls one pump.

Duplex panel controls and alternates two pumps.

Triplex panel controls and alternates three pumps.

Available in NEMA 1, 4 Double Door Dead Front, and 4X enclosures.

Enclosures are fiberglass, steel, or stainless steel.

Explosion proof models are available.

Standard features on most panels include disconnect, U/L label, pump selector switches, power to pump light, and high water alarm.

Optional features include hour meters, motor overload light, moisture sensor / temperature limiter circuit, and intrinsically safe relay for pumps with explosion proof motors.

**Lever
8213**

**Pressure Diaphragm
8220**

Level Controls - 8200

All level controls can be used with either vertical or submersible pump systems.

• **Lever**

Lever switches are mounted on a pedestal and actuated by a rod, which is moved by a float.

8201 – Simplex

8211 – Duplex Alternator

8213 – Duplex Non-Alternating

• **Pressure Diaphragm - 8220**

Pressure diaphragm controls sense liquid level by means of a diaphragm actuated micro switch.

• **Tethered**

Tethered switches are available in both pilot and HP rated units.

8230 – Tethered

8234 – Tethered – Intrinsically Safe

8235 – Tethered – High Temperature

8245 – Tethered – Piggyback

**High Water Alarm Panel
8301**

**Tethered
8230**

High Water Alarms - 8300

8301 - Remote fail safe alarm panels.

8311 - Compression type high water alarm switch.

8341 - High water alarm panel with buzzers and test switches.

Wet Well Covers

Wet Well covers are available in round, square and rectangular design with pump opening for simplex or duplex installation. Covers are available for vertical or submersible wastewater pump models. Covers can be bolted to a curb frame and set in concrete or bolted to the top flange of a wet well.

- **8816 Curb Ring or Curb Frame**
Standard Mount
Flush Mount
- **8817 Pump Opening Cover**
- **8818 Access Hatch**
For concrete wet wells

Cover Model Description

Model	Cover Style	Mat'l	Pump Mount	Pump Type	Opening Type	Pump Openings
8804	Round	Steel	2613 Removal	Submersible	Door	One & Two
8805	Round	Steel	Cover & Floor	Vertical & Submersible	Pump Opening	One & Two
8806	Round	Fiberglass	2613 Removal	Submersible	Two Piece	--
8814	Square	Steel	Cover & Floor	Vertical & Submersible	Pump Opening	One & Two
8815	Square	Steel	2613 Removal	Submersible	Door	One & Two

Cover Model Availability

Model	Discharge	Thickness	Wet Well Size
8804 Round			
Simplex	2, 3	3/8	24, 30, 36
